

# Filling Instruction

## In the box:

Mouthpiece \*50pcs + Device \*50pcs

## Step 1: Filling

1. Pre heat the oil before filling, but make sure not to pre-heat it higher than 122°F.

2. Filling needle's diameter must be 2.5mm or less.

## Step 2: Capping

Please finish capping no later than 2-3 minutes after filling, which can avoid oil leakage effectively.

We recommend to fill and cap the devices one by one.
